

We are a company who offers payment solutions through custom checkout experiences (e.g. Klarna, PayPal). We split any order amount (e.g. EUR 1,000.00) into either 3, 4 or 6 EMIs (Equated Monthly Installments)

There are 3 (three) steps to finish an order:

- Step 1: You display our EMIs where the user must choose one from, alongside with the products selected by one of our merchant stores.
- Step 2: You display the payment methods that (an existing customer) has, if it's a new customer, there must be an option to add a new payment method. A payment method can be a Debit/Credit card.
- Step 3: You display the order summary containing all the order details, including the amount the customer will end up paying depending on each EMI he/she has selected.

At the end, the user can finish checkout and receive a message saying that the order has been processed successfully.

Find the design samples below, you can replace the font and icons as you find appropriate. It must be interactive and responsive.
